

NAME: LAIBA MALIK

REG NO: FA24-B1-SE-076

SECTION: BSSE-VB

COURSE: BSE-665

TITLE: CLOUD COMPUTING

GITHUB USERNAME: LaibaMalik123

LAB NO:1

TASK NO:1

Create and Configure Your GitHub Account

1. Choose a professional GitHub username related to your actual name.

A screenshot of the GitHub 'Public profile' configuration page for the user 'LaibaMalik123'. The page has a light gray background. On the left, there is a sidebar with a list of settings: 'Public profile' (selected), 'Account', 'Appearance', 'Accessibility', 'Notifications', 'Access', 'Billing and licensing', 'Emails', 'Password and authentication', 'Sessions', 'SSH and GPG keys', 'Credentials', 'Organizations', and 'Enterprises'. The main content area is titled 'Public profile' and contains several input fields: 'Name' (filled with 'Laiba Malik'), 'Public email' (filled with 'fa24b1-se-076@fjwu.edu.pk'), 'Bio' (a text area with the placeholder 'Tell us a little bit about yourself'), and 'Pronouns' (a dropdown menu set to 'Don't specify'). To the right of the 'Name' and 'Public email' fields is a 'Profile picture' section showing a placeholder image of a purple and white checkered pattern with an 'Edit' button below it. Small text below the 'Name' field states: 'Your name may appear around GitHub where you contribute or are mentioned. You can remove it at any time.' Small text below the 'Bio' field states: 'You can @mention other users and organizations to link to them.'

The provided screenshot displays the GitHub public profile settings page for the user Laiba Malik under the account handle LaibaMalik123. It highlights the main configuration section where users can manage their personal identity, including the account name, public university email address, and pronouns. The profile picture features an abstract purple avatar, while the designated Bio text box currently remains empty, waiting for a personal introduction or professional summary. Overall, this interface allows developers to customize how their basic information and professional persona are presented to the GitHub community.

2. Open GitHub > Settings > Public profile.

This screenshot displays the GitHub Copilot settings page for the user account LaibaMalik123. It highlights the AI pair programmer feature that converts natural language prompts into coding suggestions across various programming languages. Additionally, it shows the privacy control section where users can manage permissions for allowing GitHub to use their data for AI model training.

TASK NO:2

Register in the Student Marks Portal

1. Save a screenshot showing your GitHub profile information inside the portal

The screenshot shows a registration form titled "Complete registration" with a sub-header "Enter your registration number, course and section. The enrollment requires approval." The form includes three input fields: "Registration number" with the value "2024-BSE-76", "Course" with the value "SE-665 — Cloud Computing", and "Section" with the value "Section B". Below these fields are two buttons: "Submit enrollment" and "Sign out".

ID

Complete registration

Enter your registration number, course and section.
The enrollment requires approval.

Registration number

2024-BSE-76

Allowed: 2024-BSE-01 to 2024-BSE-99.

Course

SE-665 — Cloud Computing

Section

Section B

Submit enrollment

Sign out

This screenshot shows a "Complete registration" form page where students can enroll in courses by entering their academic details. It requires the user to input a valid registration number within the specified range (such as 2024-BSE-01 to 2024-BSE-99), select a course like SE-665 Cloud Computing, and choose their section. Once the fields are filled, the enrollment can be submitted for approval using the action buttons provided.

2. Save a screenshot of the submitted or pending enrollment

The screenshot shows the "STUDENT MARKS PORTAL" with a "Course enrollments" section. It displays a user profile for "LaibaMalik123" with registration number "2024-BSE-76" and a button to "Enroll in another course". Below this is an "ENROLLMENT STATUS" section titled "Your courses" showing a course "Cloud Computing (SE-665) Section B" with a status of "Waiting for administrator approval" and a "Pending approval" label.

+ Enroll in another course

ENROLLMENT STATUS

Your courses

Cloud Computing (SE-665) Section B

Waiting for administrator approval

Pending approval

This screenshot displays the "Course enrollments" dashboard of the Student Marks Portal for the user LaibaMalik123 (Registration No: 2024-BSE-76). It shows the current status of enrolled courses, indicating that the registration for "Cloud Computing (SE-665) Section B" is currently waiting for administrator approval. The interface also provides quick options to sign out or enroll in another course.

TASK NO:3

Create the Ubuntu Server Virtual Machine

1. Save a screenshot showing VMware Workstation Pro running

- This screenshot displays the home dashboard of **VMware Workstation Pro 17**, which is a popular virtualization software used to run multiple operating systems on a single physical machine. The main interface provides three primary configuration options: creating a new virtual machine, opening an existing virtual machine, or connecting to a remote server. It also features a sidebar library panel and a top navigation menu for managing virtual environments.

2. Save a screenshot showing the downloaded Ubuntu Server ISO filename

- The image illustrates the step where a user picks an ISO file to configure a new virtual environment. The file explorer window lists various directories and disc image files, displaying details like modification dates and file types. By selecting the target ISO file and clicking the "Open" button, the setup wizard proceeds with the operating system installation configuration.

3. Save a screenshot showing the available storage.

- This screenshot displays the "Specify Disk Capacity" step in the New Virtual Machine Wizard of VMware Workstation. It allows the user to set the maximum virtual disk size, showing a recommended size of 20 GB for Ubuntu 64-bit. Additionally, it provides options to either store the virtual disk as a single file or split it into multiple files for easier transfer.

TASK NO:4

Create the Ubuntu Server Virtual Machine

1. Save a screenshot of the New Virtual Machine Wizard.

- This screenshot displays the initial configuration window of the "New Virtual Machine Wizard" in VMware Workstation Pro 17. It prompts the user to select a configuration type, offering a "Typical" setup for quick creation or a "Custom" advanced setup. Standard navigation buttons such as "Help", "Next", and "Cancel" are provided at the bottom to proceed.

2. Select **Typical (recommended)** as the virtual machine configuration. Save a screenshot showing this selection

- This screenshot displays the initial configuration window of the "New Virtual Machine Wizard" in VMware Workstation Pro 17. It prompts the user to select a configuration type, offering a "Typical" setup for quick creation or a "Custom" advanced setup. Standard navigation buttons such as "Help", "Next", and "Cancel" are provided at the bottom to proceed.

3. Save a screenshot showing the selected Ubuntu ISO path

- This screenshot displays the "Specify Disk Capacity" step in the New Virtual Machine Wizard of VMware Workstation. It allows the user to set the maximum virtual disk size, showing a recommended size of 20 GB for Ubuntu 64-bit. Additionally, it provides options to either store the virtual disk as a single file or split it into multiple files for easier transfer.

4. Save a screenshot showing the final virtual machine configuration

- This screenshot displays the final configuration screen confirming that the installation of the virtual machine is complete. It outlines essential details such as the operating system (Ubuntu 24.04 LTS), disk storage allocation, network interface, hostname, and enabled SSH service. At the bottom, users are provided with options to continue, edit settings, or reboot.

5. Save a screenshot of the Ubuntu Server boot screen

- This screenshot displays the boot menu for Ubuntu Server during the initial setup process. It presents primary startup options, including trying or installing Ubuntu Server, using the HWE kernel, booting from the next volume, or accessing UEFI firmware settings. The bottom navigation bar also provides quick function keys for help, language selection, keymaps, modes, accessibility, and other options.

TASK NO:5

Choose the Installation Language

1. Save a screenshot showing the selected language.

- This screenshot shows the language selection screen running inside an Ubuntu 64-bit virtual machine on VMware Workstation. It prompts the user to use the UP, DOWN, and

ENTER keys to choose their preferred installation language. The interface displays a comprehensive list of multi-lingual options, with "English" currently highlighted and selected.

TASK NO:6

Configure the Keyboard Layout

1. Save a screenshot showing the selected keyboard layout.

- This screenshot displays the "Keyboard configuration" screen during the Ubuntu Server installation setup. It prompts the user to select their specific keyboard layout and variant, with "English (US)" chosen by default. Additionally, it provides an "Identify keyboard" option for automatic detection, alongside "Done" and "Back" navigation buttons at the bottom.

2. Save a screenshot showing the selected keyboard variant

- This screenshot displays the "Keyboard configuration" screen during the Ubuntu Server installation setup. It prompts the user to select their specific keyboard layout and variant, with "English (US)" chosen by default. Additionally, it provides an "Identify keyboard"

option for automatic detection, alongside "Done" and "Back" navigation buttons at the bottom.

TASK NO:7

Choose the Ubuntu Server Installation Type

1. Save a screenshot showing the selected installation type.

- This screenshot displays the "Keyboard configuration" screen during the Ubuntu Server installation setup. It prompts the user to select their specific keyboard layout and variant, with "English (US)" chosen by default. Additionally, it provides an "Identify keyboard" option for automatic detection, alongside "Done" and "Back" navigation buttons at the bottom.

TASK NO:8

Configure the Network

1. Save a screenshot showing the detected network interface

- This screenshot displays the "Detecting network" phase during the Ubuntu Server installation process. It shows the system actively detecting the network configuration and scanning for available network interfaces, noting that the process may take a moment. Navigation options like "Done" and "Back" are provided at the bottom of the screen.

2. Save a screenshot showing the assigned network address

- This screenshot displays the "Network configuration" summary screen during the Ubuntu Server setup process. It outlines key parameters assigned to the system, including the Ethernet interface (ens33) status as UP, IPv4 and IPv6 addresses, gateway, and DNS servers. The interface confirms that the network configuration is active and ready to use, providing options to continue, edit settings, or go back.

TASK NO:9

Configure Storage

1. Save a screenshot showing the selected guided storage option

```
C:\Windows\system32\cmd.e: X + v
LaibaMalik123@192.168.150.128's password:
Welcome to Ubuntu 26.04.1 LTS (GNU/Linux 7.0.0-30-generic x86_64)

* Documentation:  https://docs.ubuntu.com

- This screenshot displays a Windows Command Prompt window successfully connected via SSH to an Ubuntu 26.04.1 LTS server running at IP address 192.168.150.128 under the user account LaibaMalik123. It shows live system performance metrics such as system load, disk usage, memory utilization, and active network interfaces. Additionally, it provides notification about pending system updates and security maintenance options

TASK NO:10

Select the Installation Disk

1. Save a screenshot showing the selected disk

- This screenshot displays the "Specify Disk Capacity" step in the New Virtual Machine Wizard of VMware Workstation. It allows the user to set the maximum virtual disk size, showing a recommended size of 20 GB for Ubuntu 64-bit. Additionally, it provides options to either store the virtual disk as a single file or split it into multiple files for easier transfer.

2. Save a screenshot showing the disk name and size

- This screenshot displays the "Specify Disk Capacity" wizard page in VMware Workstation where the maximum hard disk size is defined. It sets the disk limit to a default recommended value of 20.0 GB for Ubuntu 64-bit. Additionally, it provides options to store the virtual disk as a single file or split it into multiple files for easier file transfers.

TASK NO:11

Review the Partitions

1. Save a screenshot showing the proposed partitions

- This screenshot displays the final "Ready to Create Virtual Machine" review screen in VMware Workstation. It summarizes all selected configuration details, including the Ubuntu 64-bit operating system, 20 GB split hard disk, 4096 MB memory, NAT network adapter, and other hardware components. Users can click "Finish" to create the virtual machine and automatically power it on after creation.

TASK NO:12

Confirm the Storage Changes

1. Save a screenshot showing the final warning

- This screenshot displays the "Specify Disk Capacity" wizard page in VMware Workstation where the maximum hard disk size is defined. It sets the disk limit to a default recommended value of 20.0 GB for Ubuntu 64-bit. Additionally, it provides options to store the virtual disk as a single file or split it into multiple files for easier file transfers.

TASK NO:13

Configure the Ubuntu Profile

1. Save a screenshot showing the entered name

- This screenshot displays a standard active terminal prompt running inside the Ubuntu system for the user account LaibaMalik123. It shows the command-line prompt set to the home directory (~), indicated by the \$ symbol, ready to accept user input and commands.

This interface is typically used by administrators and developers to execute shell commands, manage files, and configure system software.

2. Save a screenshot showing the server name

```
LaibaMalik123@Ubuntu:~$
```

- This screenshot displays a standard active terminal prompt running inside the Ubuntu system for the user account LaibaMalik123. It shows the command-line prompt set to the home directory (~), indicated by the \$ symbol, ready to accept user input and commands. This interface is typically used by administrators and developers to execute shell commands, manage files, and configure system software.

3. Save a screenshot showing the Ubuntu username

```
LaibaMalik123@Ubuntu:~$
```

- This screenshot displays a standard active terminal prompt running inside the Ubuntu system for the user account LaibaMalik123. It shows the command-line prompt set to the home directory (~), indicated by the \$ symbol, ready to accept user input and commands. This interface is typically used by administrators and developers to execute shell commands, manage files, and configure system software.

4. Save a screenshot of the completed profile page

The screenshot shows a terminal window titled 'Ubuntu 64-bit'. The terminal output is as follows:

```
Ubuntu 26.04.1 LTS Ubuntu tty1
Try contacting this VM's SSH server via 'ssh vsock%1260701469' from host.
Ubuntu login: LaibaMalik123
Password:
Welcome to Ubuntu 26.04.1 LTS (GNU/Linux 7.0.0-31-generic x86_64)

 * Documentation:  https://docs.ubuntu.com

System load:  0.0               Processes:    223
Usage of /:   35.3% of 9.75GB   Users logged in: 0
Memory usage: 11%              IPv4 address for ens33: 192.168.150.128
Swap usage:  0%

Expanded Security Maintenance for Applications is not enabled.
6 updates can be applied immediately.
To see these additional updates run: apt list --upgradable

Enable ESM Apps to receive additional future security updates.
See https://ubuntu.com/esm or run: sudo pro status

LaibaMalik123@Ubuntu:~$
```

- This screenshot displays a successful login session inside the **Ubuntu 64-bit** virtual machine terminal running on VMware Workstation. It shows that the user **LaibaMalik123** has successfully authenticated on **Ubuntu 26.04.1 LTS (tty1)**, displaying system resource metrics like memory usage (11%) and disk status. The terminal prompt at the bottom (**LaibaMalik123@Ubuntu:~\$**) indicates that the system is fully loaded and ready for command execution.

TASK NO:14

Complete the Software Installation

1. Save a screenshot showing the installation progress

```
[ Final configuration ]

The installation is complete. Here are the details of your virtual machine:

Name       : Ubuntu Server
OS          : Ubuntu 24.04 LTS
Installation type : Guided - use entire disk
Disk       : /dev/sda (20.0 GB)
Network    : ens33 (NAT)
Hostname   : ubuntu-server
Domain     : (none)
Username   : ubuntu
SSH        : Enabled

Press ENTER to continue, or select a different option.
```

- This screenshot displays the final configuration screen verifying that the virtual machine installation is successfully finished. It provides a complete summary of the setup parameters, including the operating system version, guided disk partitioning type (/dev/sda with 20.0 GB), NAT network interface, hostname, and enabled SSH service. Users can press enter to continue or select alternative actions from the bottom menu.

TASK NO:16

Find the Ubuntu Server IP Address

1. Save a screenshot showing the command and its output

```
LaibaMalik123@Ubuntu:~$ ip a
1: lo: <LOOPBACK,UP,LOWER_UP> mtu 65536 qdisc noqueue state UNKNOWN group default qlen 1000
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
    inet 127.0.0.1/8 scope host lo
        valid_lft forever preferred_lft forever
    inet6 ::1/128 scope host noprefixroute
        valid_lft forever preferred_lft forever
2: ens33: <BROADCAST,MULTICAST,UP,LOWER_UP> mtu 1500 qdisc pfifo_fast state UP group default qlen 1000
    link/ether 00:0c:29:24:c7:1d brd ff:ff:ff:ff:ff:ff
    altname enp2s1
    altname enx000c2924c71d
    inet 192.168.150.128/24 metric 1024 brd 192.168.150.255 scope global dynamic ens33

    inet6 fe80::20c:29ff:fe24:c71d/64 scope link proto kernel_ll
        valid_lft forever preferred_lft forever
LaibaMalik123@Ubuntu:~$ _
```

- This screenshot displays the terminal output of the ip a network configuration command executed by user LaibaMalik123 on the Ubuntu server. It lists all network interfaces, showing details for the loopback interface (lo) and the active Ethernet interface (ens33)

with its assigned IPv4 address (192.168.150.128/24) and MAC address. The prompt returns to an active state at the bottom, ready for further command execution.

2. Save a screenshot clearly showing the correct IPv4 address

```
LaibaMalik123@Ubuntu:~$ ip a
1: lo: <LOOPBACK,UP,LOWER_UP> mtu 65536 qdisc noqueue state UNKNOWN group default qlen 1000
   link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
   inet 127.0.0.1/8 scope host lo
       valid_lft forever preferred_lft forever
   inet6 ::1/128 scope host noprefixroute
       valid_lft forever preferred_lft forever
2: ens33: <BROADCAST,MULTICAST,UP,LOWER_UP> mtu 1500 qdisc pfifo_fast state UP group default qlen 1000
   link/ether 00:0c:29:24:c7:1d brd ff:ff:ff:ff:ff:ff
   altname enp2s1
   altnamename enx00c2924c71d
   inet 192.168.150.128/24 metric 1024 brd 192.168.150.255 scope global dynamic ens33
       valid_lft 1485sec preferred_lft 1485sec
   inet6 fe80::20c:29ff:fe24:c71d/64 scope link proto kernel_l1
       valid_lft forever preferred_lft forever
LaibaMalik123@Ubuntu:~$ _
```

- This screenshot displays the terminal output of the `ip a` network configuration command executed by user `LaibaMalik123` on the Ubuntu server. It lists all network interfaces, showing details for the loopback interface (`lo`) and the active Ethernet interface (`ens33`) with its assigned IPv4 address (192.168.150.128/24) and MAC address. The prompt returns to an active state at the bottom, ready for further command execution.

TASK NO:17

Connect to Ubuntu Server from Windows

1. Save a screenshot showing the SSH command

```
LaibaMalik123@Ubuntu:~$ ssh LaibaMalik123@192.168.150.128 echo
The authenticity of host '192.168.150.128 (192.168.150.128)' can't be established.
ED25519 key fingerprint is: SHA256:Uz3iyK2WqgpRqbcS5ec4BRSb0GfSP64mgL8Z9vAQMFU
This key is not known by any other names.
Are you sure you want to continue connecting (yes/no/[fingerprint])? |
```

- This screenshot displays a terminal session where the user `LaibaMalik123` attempts to initiate an SSH connection to the server IP 192.168.150.128. Because this is a first-time connection, the system displays a security warning stating that the authenticity of the host

cannot be established and shows the ED25519 key fingerprint. It prompts the user to confirm whether they want to continue connecting by typing yes or no.

2. Save a screenshot showing the accepted fingerprint

```
LaibaMalik123@Ubuntu:~$ ssh LaibaMalik123@192.168.150.128 echo
The authenticity of host '192.168.150.128 (192.168.150.128)' can't be established.
ED25519 key fingerprint is: SHA256:Uz3iyK2WqgpRqbcS5ec4BRsb0GfSP64mgL8Z9vAQMFU
This key is not known by any other names.
Are you sure you want to continue connecting (yes/no/[fingerprint])? yes
Warning: Permanently added '192.168.150.128' (ED25519) to the list of known hosts.
LaibaMalik123@192.168.150.128's password:
LaibaMalik123@Ubuntu:~$ |
```

- This screenshot displays the terminal sequence where the user answers yes to accept the SSH host key verification warning. It shows that the server IP address has been permanently added to the list of known hosts. Following this, the system successfully prompts for the account password to complete the remote connection.

3. Save a screenshot showing the successful SSH session

```

TASK NO:18

Prepare Lab1 Solution PDF

1. Save a screenshot of the completed title page

- This screenshot displays the cover or title page for a university lab manual or assignment document belonging to Fatima Jinnah Women University. It clearly lists student details including the name Laiba Malik, registration number FA24-B1-SE-076, section BSSE-VB, and GitHub username LaibaMalik123. Additionally, it identifies the course as BSE-665 Cloud Computing for Lab No: 1.

THE END!!!
